About

Describe your project in a few paragraphs. Cover:

- The problem it solves
- Why you built it
- Who it's for
- What makes it unique or interesting

Features

- ■ Feature 1 – brief explanation
- ■ Feature 2 – brief explanation
- ■ Feature 3 – in progress or planned
- ■ Feature 4 – future stretch goal

Built With

- ****Languages****: Python, C++, JavaScript
- ****Frameworks****: Flask, React, TensorFlow
- ****Libraries****: scikit-learn, pandas, D3.js
- ****Tools****: Docker, GitHub Actions, Figma, VS Code

Getting Started

Prerequisites

```
```bash
```

```
Example
python3 --version
pip install -r requirements.txt
'''
```

```
Installation
```bash
git clone https://github.com/yourusername/your-project.git
cd your-project
# Activate virtualenv, etc.
'''
```

Usage

Explain how to run your project:

- For CLI apps, give command examples
- For web apps, share how to start the server and access it
- Include screenshots or screen recordings if needed

Project Structure

```
'''
your-project/
  ■■■ src/
  ■ ■■■ main.py
  ■ ■■■ utils.py
  ■■■ data/
  ■ ■■■ sample_input.csv
  ■■■ tests/
  ■ ■■■ test_main.py
  ■■■ README.md
  ■■■ requirements.txt
'''
```

Roadmap

Feature	Status	Priority
-----	-----	-----
Feature A	■ Done	High
Feature B	■ In Progress	Medium
Feature C	■ Planned	Low

Research & References

- [Paper or blog post you read](https://example.com)
- [API Documentation](https://api.com)
- [Related projects you were inspired by](https://github.com/xyz)

Testing

Explain your testing setup:

- What testing framework you use (e.g. `unittest`, `pytest`)
- How to run tests
- What areas are covered

```
```bash
pytest
```
```

Challenges

List tough problems you faced and how you overcame them:

- ■ Complex bug or refactor
- ■ Difficult algorithmic problem
- ■ Conceptual block you had to research

Lessons Learned

- Concept or tech you mastered
- Unexpected insights
- Mistakes that taught you something
